

Title

FOREST HARVESTING IN PROTECTED WATER SUPPLIES IN NEWFOUNDLAND AND LABRADOR

Date

2003

Keywords

Forest, Harvesting, Drinking Water

Objective

To characterize the current situation in Newfoundland and Labrador with respect to forest harvesting in protected water supplies and to provide recommendations for an approach that can help ensure a symbiotic relationship between forest managers and municipalities.

Description

Forest Harvesting in protected water supply areas is an issue for many municipalities in Newfoundland and Labrador. Forest companies are looking to protected water supply areas to provide them with much needed fiber, while municipalities have concerns over the quality of their drinking water. This report outlines how each of Canada's provinces are dealing with the issue of forest harvesting and drinking water quality.
