

Title

ENVIRONMENTALLY SENSITIVE PRACTICES

Model Forest

Western Newfoundland Model Forest

From

March 1996

To

March 1998

Keywords

Training, Environmental Sensitivity

Objective

To instill environmentally sensitive practices within front line workers.

Description

This project involved the development of two training modules. The first is designed for resource managers and researchers and is more technical in nature. This serves to transfer new approaches and decision making systems for use outside of the Model Forest. The second training course is designed for the public and forest workers. It addresses such issues as domestic cutting, understanding the environment, and sound environmental practices in the forest.

Training is designed to incorporate basic environmental protection goals, and good harvesting and work techniques that enhance wildlife habitat, recreation and aesthetic values.
